in Archive & Storage management

FlashNet and Avid Interplay | Archive®

FlashNet and Avid's Interplay | Archive solution together provide the most comprehensive content archive and storage management solution for Avid users.

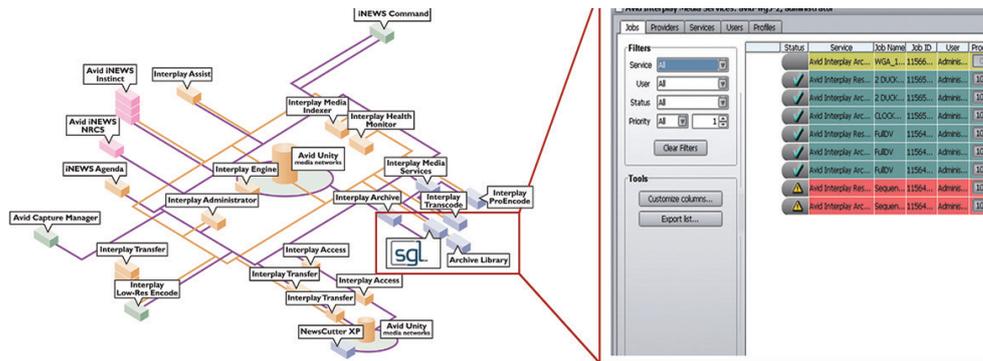

The deep and elegant integration between Interplay | Archive and SGL's FlashNet means that Avid users can manage both archived and online media within their Interplay Production application.

Avid users never need to switch to FlashNet to manage their archival, search, or restore processes. Even checking the status of a current request, or checking the archive job queue, is managed directly within Interplay | Archive.

The Interplay | Archive and FlashNet integration is the result of a rich co-development partnership between Avid and SGL.

FlashNet, Driving Avid Interplay Archive

SGL FlashNet fits within Avid's Media Central Platform, connected within the Avid open system architecture that encompasses Avid Interplay and the entire suite of Avid systems and solutions.

SGL and Avid also provide elegant integration between FlashNet and Interplay | MAM.

FlashNet: Scalable and Resilient

FlashNet is built around a clustered architecture, which allows virtually infinite scalability of the archive, from the smallest call-letter stations to the largest network operation. SGL FlashNet comprises three base modules, which can be run on a single server to provide cost-efficient archive operations in a compact installation, or can be installed or extended across multiple nodes to form a cluster that provides automatic failover and high levels of data throughput.

SGL FlashNet's architecture also provides unrivalled resilience: in the event that a node fails, its duties are automatically taken over by other cluster members, without interruption to archive operations and without requirement for manual intervention.

FlashNet & Interplay | Archive

The most comprehensive integrated archiving solution for Avid Interplay.

- Archive and Restore Direct from Avid Interplay
- Efficient Partial File Restore
- Free up Space on Avid ISIS
- Monitor Archiving Activity from within Interplay
- Full Support for Master-Clips, Sub-Clips and Sequences

Key Features and Benefits

- *Archive clips directly from Avid applications*
Send a clip to the selected archive destination from Avid Interplay | Access or Media Composer, without clip duplication.
- *Archive automatically with the Auto Archive folder*
Simply drag a clip or sequence to the Auto Archive folder. The file will be automatically archived.
- *Low-resolution browsing of archived media*
When the sequence is archived, high-resolution media can be deleted from online storage, while the low-resolution material remains available for real-time browsing and playing.
- *Search the archive database*
Easily search for a clip in the archive database using the Search tab in the Avid Interplay | Access window, or simply use the tree view to locate the clip you want to restore.
- *Retrieve from the archive database*
Use the results of a search to select a clip to restore, or simply use the tree view to locate the clip you want to restore.
- *Easy Archive and restore from Avid editing applications*
No need to leave your Avid Media Composer, NewsCutter, Instinct or Symphony Nitris while sending or retrieving media to and from the archive.
- *Save time and disk space with Partial Restore*
Restore just the necessary portions of a large master clip or finished sequence with the Partial Restore feature. Restore only the media needed for your required subclip.

Start Small and Grow

For sites that do not need the full power of the Interplay | Archive, SGL also offers an Interplay Web Services plug-in, which contains many of the features of Interplay | Archive, and which supports a future upgrade if the full functionality becomes necessary in the future, without loss of any data, or a confusing change in workflow.
